Summary

Aspiring cybersecurity professional and MCA student with a strong foundation in security tool development, threat analysis, and network defense. Eager to contribute to a security-driven team as a SOC analyst, threat intelligence specialist, or security engineer, and to grow through real-world challenges in an industry-leading environment.

Projects

- AbuseBox** | *Python, FastAPI, React, Docker, DNSBL, AbuseIPDB, JWT* 2026
- Built an open-source threat monitoring toolkit scanning IPs, domains, and servers against **60+ DNSBL blacklist providers** and AbuseIPDB for real-time IP reputation intelligence.
 - Implemented bulk IP/domain check (up to 20 targets), CIDR/subnet scanning (/24), WHOIS, DNS record viewer, SSL certificate checker, and SPF/DKIM/DMARC email-authentication validation.
 - Designed scheduled monitoring with email and webhook alerts, historical blacklist trend charts, asset management dashboard, and delist workflow — fully self-hosted via Docker Compose.
 - Shipped 5 production releases with JWT-based authentication, security hardening, responsive mobile UI, and CSV data export.
- AI Threat Intelligence Assistant** | *FastAPI, Google Gemini AI, VirusTotal, AbuseIPDB* 2026
- Developed an AI-powered cybersecurity tool that concurrently aggregates multi-source intelligence from VirusTotal and AbuseIPDB to analyze **IPs, domains, and URLs** for active threats.
 - Integrated **Google Gemini 2.5 Flash** with JSON schema validation to generate structured analyst-grade threat reports covering risk level, attack types, investigation steps, and mitigations.
 - Engineered a **rule-based fallback engine** ensuring uninterrupted analysis under API quota limits, alongside an AI-vs-VirusTotal comparison module for report integrity verification.
 - Delivered a professional **SOC-grade dashboard** (Splunk/Falcon aesthetic) with color-coded severity indicators, quick-stat KPIs, and session-persistent lookup history.
- Spyware Analysis Tool** | *Python, Keylogger, System Reconnaissance* (Educational) 2025
- Built a Python-based spyware simulation demonstrating real-world **malware mechanics**: keystroke logging, clipboard interception, and browser history extraction.
 - Implemented **system reconnaissance** features including IP retrieval, host/OS fingerprinting, screenshot capture, and search-history export — mapping common attacker data-exfiltration paths.
 - Documented findings to raise cybersecurity awareness, enabling students and professionals to understand **spyware internals** and corresponding endpoint defense strategies.

Technical Skills

Programming Languages: Python, JavaScript, HTML5, CSS3, SQL
Cybersecurity: DNSBL Monitoring, WHOIS / DNS / SSL Analysis, IP Reputation (AbuseIPDB, VirusTotal),
Frameworks & Libraries: FastAPI, React.js, Pydantic, SQLAlchemy, dnspython, httpx
AI & APIs: Google Gemini AI, VirusTotal API, AbuseIPDB API
DevOps & Tools: Docker, Docker Compose, Git, GitHub, Swagger UI, JWT Authentication
Databases: SQLite, REST API Design

Education

- **Gharda Institute of Technology & Management** 2025 – Pursuing
Master of Computer Applications (MCA)
- **Devgad College** 2022 – 2024
Bachelor of Management Studies (BMS) **CGPA: 7.74**

Languages

English — Professional Working Proficiency · **Hindi** — Native / Full Proficiency · **Marathi** — Native / Full Proficiency
